Exchange parts

The Proofmaster family has 2 different exchange systems and 3 different interface types:

Exchange systems:

- Standard: Exchangable fixed part
- Quick exchange: Quick exchangable part

Interface types:

- None
- VPC: internal wiring
- DDI: internal wiring or PCB routing

PCB Interface

With the DDI interface you can replace your wiring through a PCB, for more stable signals and more functionality.

Quick wire

This wire is prepared with a DDI contact. Works time-saving, during wiring of the test fixture. Only applicable with DDI interface.

Back panel

The optional back panel is prepared for:

- Power
- USB
- Sub-D
- Air pressure inlet

Mounting plate

The mounting plate is a hard plastic plate that gives you the possibility to easily attach your own test peripherals.
